UrbanZee
We care for Air

Certificate of Internship

Date: 19 April 2018
Location: Turku, Finland

To whom it may concern,

This letter is to verify that UrbanZee has hosted **Liliana Listus** as an intern from the **1st of August 2017** until the **19th of April 2018** as a **Software Developer Intern**.

During these periods the main duties of **Liliana Listus** were:

• Develop python scripts to convert survey data so it could be migrated from SurveyMonkey to LimeSurvey

• Implement some of the missing unit-tests in Python for our Django backend

During her time as a software developer intern, I actively coached Lilifana and saw her eyes open to the possibilities of technology. She had some basic skills in Android development before our project, but got a deeper understanding through her python related projects. With these possibilities open to her she start applying some of the newly aquired programming skills in other parts of live, such as her Finno-Ugric thesis efforts.

I enjoyed seeing her passion for technology grow through her own projects, such as tinkering with the Raspberry Pi, or repurposing old laptops and install Linux on it.

If Liliana continues following her passions she will be able to develop a good set of skills, that are suitable in many job situations, especially if she explores the combination of her language studies with her newly discovered passion for technology. Whichever direction she chooses, her passion will get her there.

For a verbal reference, please call me at +358 50 567 666 5.

Sincerely,

Aschwin van der Woude
CEO, Caring Ecosystems Officer
